FOR MEN ONLY =
New Breakthroughs
in Birth Control.

(Thanks to The Monthly Extract and Majority Report for permission to reprint some of the selections).

PENIS COIL "STATISTICALLY SAFE"

INTERCOURSE, PA. July 10. Dr. Sonia Softig of the Blue Balls Birth Control Clinic announced today the most effective method of birth control since castration.

The device, which Dr. Softig invented, is a microscopic coil which can safely be inserted into the penis with very little discomfort to the man. It will remain intact for as long as desired and can be removed as easily as it was inserted - that is, with a tiny steel rod which is gently rammed through the penis opening.

The main feature of the coil is its retentive power. Experiments on a hundred generations of pigs (whose sexual apparatus is said to be closest to man's) showed an expulsion rate of only 1.3% with a complication rate of merely 18%.

Dr. Softig announced that the new coil has also been tested on unsuspecting male grad students who visited their University Health Clinic during the week of July 1 - July 8. An experimental study at Macho University showed that of the 762 male grad students who were given the coil, only 112 reported any adverse effects. Of these, 84 requested that the coil be removed. However, they were informed that they would have to wait until the study was completed before they could have the coil taken out.

Dr. Softig has conceded that occasionally a man will not be able to tolerate the coil. But she emphasized that this is entirely the fault of that particular man. "When we get such a case," she stated, "we usually refer the man to a psychiatrist."

INJECTION DECAPITATES SPERM

RUTTING, N.M. July 10 - A simple method of birth control by injection of a liquid into the penis has been discovered at the Rutting Clinic by Dr. Eve Weltzmerz.

"Using an ordinary hypodermic needle such as used by junkies all over the world, the new chemical formula (pat. pending) will decapitate the sperm, thus rendering it incapable of entering the female egg." Dr. Weltzmerz declared.

Experiments on a thousand white whales from the continental shelf (whose sexual apparatus is said to be closest to man's) proved the new chemical to be 100% effective in preventing pregnancy and eminently satisfactory to the female whale since it does not interfere with her rutting pleasure.

NEW HEAT WAVE KILLS SPERM

ANDROGEN, FLORIDA July 10 - Scientists at Mammary Research Clinic announced today that they have developed an entirely new concept in birth control. Based on the findings of Dr. Sharon Suffrage, whose study on heat waves was published last year, the Clinic is testing the effects of heat on sperm production.

Dr. Suffrage discovered that when intense heat was applied to the scrotum, the male's sperm was immediately destroyed. Of course, so were the testicles, but Suffrage thinks that this minor problem can be overcome.

In announcing this new breakthrough in birth control, Suffrage explained that she is presently developing a portable hot iron which can be applied directly to the scrotum by the man himself. The hot iron will be marketed commercially by Suffrage Pharmaceutical Co. under the trade name "Hot Rod."

Several thousand male prisoners have been using the Hot Rod since April, and the results look promising. "We have only had 34 cases of third degree burns," she stated, and we are working closely with the local Burn Unit to see whether or not the patients will recover. Prison officials have noted that since the advent of the Hot Rod, there have been 43% fewer escape attempts. Prison officials have noted that since the advent of the Hot Rod, there have been 43% fewer escape attempts. When asked about the correlation between the use of the Hot Rod and the incidence of prison breaks, the warden replied, "Well, the men seem reluctant to talk around anymore."

"UMBRELLY UNFURLED"

by Jane Field

Special Science Editor.

PUDENDA, KANSAS, July 10 - An entirely new method of birth control has been discovered by Dr. Lura Merkin of the Merkin Clinic. A tiny folded umbrella is inserted in the penis and opens automatically when it has reached the apex of the shaft. The underside of the umbrella contains jelly (hence, the name "umbrelly") which causes the sperm to undergo a chemical change rendering it incapable of fertilizing the egg. Dr. Merkin said that the "umbrelly" can be inserted in the penis without an anesthetic, and with very little discomfort to the male. Thus, it can be done in a matter of minutes, in any soundproof doctor's office.

Experiments on a thousand goats (whose sexual apparatus is said to be closest to man's) proved the sperm umbrelly to be 100% effective in preventing pregnancy and eminently satisfactory to the female goat since it does not interfere with her rutting pleasure.

Dr. Merkin declared the "umbrelly" to be statistically safe for man. "Out of every hundred goats, only two died of intra-penis infection; only twenty experienced painful swelling in the unerected member; sixteen developed cancer of the testicles; and thirteen were too depressed to have an erection."

Dr. Merkin pointed out that early cancer detection is a feature of the Merkin Clinic. Removal of one or both testicles is now considered a simple operation and has very little effect on a goat's sexual prowess. Only one out of a thousand goats had to have a radical penectomy - that is, removal of the penis as well as the testicles. "But it is too rare to be statistically important", Dr. Merkin said. Other distinguished members of the Women's College of Physicians and Surgeons agreed that the results far outweigh the risk to individual men.

IPD (Intrapeanal device) IS TESTED

URP: The newest development in male contraception was recently tested on male prostitutes. Called the intrapeanal device or the IPD, it is inserted through the head of the penis and pushed into the scrotum with a plunger-like instrument. Occasionally there is perforation of the scrotum which is disregarded since the male has no sensitivity to this

area of his body. No one really knows how they work or what the long range effects will be, but then, who cares?

Common complaints have been severe cramping, massive hemorrhaging and green discharges from the head of the penis which are merely signs that the man's body has not yet adjusted to the "new resident." Hopefully these symptoms will disappear within a year.

IPDs usually are implanted with a string to insure quick removal or for sado-masochistic "play." In cases where the sex partner has complained of the string, the string is removed and then the IPD must be taken out surgically.

Note There are four illustrations and a heading states
CAN YOU NAME THESE I.P.D.'s?

A. whirling dervish

B. silent spring

C. the drop kick

D. stiff upper lippy

end.

3.

K.McD. The above article is actually reverse speculation on what reaction there would be if the "experiments" that have been performed on WOM(B)en were performed in the same way and with the same indifference on the men who have been abusing women experimentally especially with reference to IUD's (intra-uterine devices).
